## PROFILE

I am an enthusiastic computer science student driven by the excitement of tackling challenges that push the boundaries of my abilities. My relentless pursuit of knowledge motivates me to seek out projects that help me expand my skill set. I find immense fulfillment in collaborating with diverse teams, where I can learn from others while contributing my problem-solving expertise.

## PROJECTS

### Able - Learning Management System

- Developed a LMS with course creation, user management, secure authentication, and payment processing, featuring a responsive UI and integrated file and video uploads.
- Technologies : Nextjs, TypeScript, React, MySQL, Prisma, eSewa, Tailwind CSS, Shadcn UI, UploadThing

### Sneakerhead

- Designed and built a sneaker-focused e-commerce platform featuring a robust backend for efficiently managing products, user accounts, and orders, with an intuitive frontend for a seamless shopping experience and enhanced user engagement.
- Technologies : HTML, CSS, JavaScript, PHP, MySQL

### Wechat

- Created a chat application allowing users to sign in with their email addresses and engage in conversations. Implemented features such as user authentication, real-time messaging, and group chats.
- Technologies : HTML, CSS, JavaScript, PHP, MySQL

### Weather App

- Developed a weather app that provides real-time weather updates, including current conditions and detailed 7-day forecasts, with features for location-based data and search functionality.
- Technologies : ReactJS, OpenWeatherMap

### 1xSpeed

- Crafted a typing speed test website reminiscent of platforms such as Monkeytype with real-time typing tests, accuracy tracking, and performance metrics.
- Technologies : HTML, CSS, JavaScript

### Number Puzzle

- A game that challenges players to manipulate numbers on a grid to solve puzzles and achieve specific goals, enhancing skills in algorithm implementation.
- Technologies : Java
